

I-Shou University Department of Civil Engineering

The 7th International Conference on

Advances in Civil and Ecological Engineering Research

Conference Program

July 21-24, 2025 Matsue, Japan

The Chinese Institute of Environmental Engineering, Taiwan The 7th International Conference on Advances in Civil and Ecological Engineering Research (ACEER 2025)

CONFERENCE PROGRAM

July 21st-24th, 2025 Matsue, Japan

Table of Contents

Part I Conference Schedule Summary1
Part II Keynote Speeches
Keynote Speech 1: The Roles of Urban Wetlands for Water Purification, Biological Conservation, and Aquatic Production: The Case of Hong Kong, South China
Keynote Speech 2: Optimizing O ₃ -UV Process for Wastewater Advanced Treatment with A Novel Mini- Fluidic Experimental System to Minimize Energy Consumption: Chemical Oxidation Vs. Advanced Oxidation
Keynote Speech 3: Application of Fluidized-Bed Fenton Process for Industrial Wastewater Treatment
Keynote Speech 4: Biochar: An Eco-Friendly and Sustainable Material for Versatile Applications6
Part III Poster Presentations7
Part IV Oral Presentations
Invited Speeches Session
Student Oral Presentations Session I
Student Oral Presentations Session II14
Invited & Oral Session I: Water Treatment and Environmental Sciences
Invited & Oral Session II: Structural Engineering, Geological Engineering and Sustainable City17
Video Presentations
Part V Conference Venue19
Part VI Acknowledgements

* For ACEER 2025 Academic Exchange Only

Part I Conference Schedule Summary

July 21st, 2025 / Japan Standard Time (UTC+9) Location: In front of Small Hall, Kunibiki Messe

14:00-18:00 On-site Registration

Notes for registration:

* Please show us your name or paper ID for registration.

* Please pick up all the conference materials at the registration desk (Name Card, Conference Program, Lunch & Dinner Tickets, etc.).

July 22nd, 2025 / Japan Standard Time (UTC+9) Location: Small Hall, Kunibiki Messe

Opening Ceremony and Keynote Speeches are chaired by: Emeritus Prof. Chih-Huang Weng, I-Shou University Distinguished Prof. Zhimin Qiang, Shanghai Jiao Tong University

08.40-08.50	Opening & Welcome Speech		
00.40-00.50	Prof. Emeritus Hisayoshi Hayashi, University of Tsukuba		
08:50-09:20	Keynote Speech 1: The Roles of Urban Wetlands for Water Purification, Biological Conservation, and Aquatic Production: The Case of Hong Kong, South China Prof. Ming Hung Wong , Advisor/Research Chair Professor (Environmental Science). The Education University of Hong Kong		
09:20-09:50	 Keynote Speech 2: Optimizing O₃-UV Process for Wastewater Advanced Treatment with A Novel Mini-Fluidic Experimental System to Minimize Energy Consumption: Chemical Oxidation Vs. Advanced Oxidation Prof. Zhimin Qiang, School of Environmental Science and Engineering, Shanghai Jiao Tong University 		
09:50-10:10	Group Photo		
10:10-10:30	Coffee Break		
10:30-11:00	 Keynote Speech 3: Application of Fluidized-Bed Fenton Process for Industrial Wastewater Treatment Prof. Ming-Chun Lu, Distinguished Professor, Department of Environmental Engineering, National Chung Hsing University 		
11:00-11:30	 Keynote Speech 4: Biochar: An Eco-Friendly and Sustainable Material for Versatile Applications Prof. Emeritus Chih-Huang Weng, Department of Civil Engineering, I-Shou University 		
11:30-12:20	Poster Session		
12:20-13:20	Lunch Break		
13:20-17:56	Invited Speeches Session		

July 23rd, 2025 / Japan Standard Time (UTC+9)			
Time	Schedule	Location	
08:40-10:40	Student Oral Presentations Session I		
10:40-11:00	Coffee Break		
11:00-13:00	Student Oral Presentations Session II	Small Hall,	
13:00-14:00	Lunch Break	Kunibiki Messe	
14.00 17.20	Invited & Oral Session I: Water Treatment and		
14.00-17.20	Environmental Sciences		
14.00 17.10	Invited & Oral Session II: Structural Engineering,	Meeting Room 401,	
14.00-17.10	Geological Engineering and Sustainable City	Kunibiki Messe	
17.20 20.20	Awarding Banquet (Please gather at the entrance of	YUUSHIEN Garden in	
17:30-20:30	Kunibiki Messe)	Daikonshima	

July 24th, 2025 / Japan Standard Time (UTC+9)		
09:10	Departure from Kunibiki Messe (Please gather at the entrance of Kunibiki Messe)	
09:30-10:30	Visit Matsue Castle	
10:40-11:40	Horikawa Sightseeing Boat Ride	
11:50-12:40	Lunch Break	
13:00-15:00	Matsue Vogel Park	
15:30	Arrival at JR Matsue Station at 15:30 (Subject to no traffic delays)	

Notes: Please note that the itinerary, including the order of visits and time spent at each location, is subject to change based on actual circumstances.

Part II Keynote Speeches

Keynote Speech 1: The Roles of Urban Wetlands for Water Purification, Biological Conservation, and Aquatic Production: The Case of Hong Kong, South China

Prof. Ming Hung Wong Advisor/Research Chair Professor (Environmental Science), The Education University of Hong Kong

Biography: Professor Wong is a Foreign Member of the Russian Academy of Sciences, a Member of the European Academy of Sciences and Arts, and Chang Jiang Chair Professor of the Ministry of Education, China. He served as the Editor-

in-Chief of 'Environmental Geochemistry and Health' (Springer Nature) for 20 years (2002-2023). Professor Wong was the Coordinator of Central and North-East Asia of 'Regionally Based Assessment of Persistent Toxic Substances' and a Panel Member (of 3 experts) of 'Chemicals Management Issues of Developing Countries and Countries with Economies in Transition', sponsored by UNEP/GEF, during 2001-2003 and 2010-2012, respectively. His research areas included 'Environmental toxicology'; 'Ecological restoration'; and 'Resource reuse'. He has published over 850 SCI papers. In addition to his Ph.D. (Durham), he was awarded two higher Doctoral Degrees based on published papers in 1992 and 2004: DSc (Durham) and DSc (Strathclyde). Recently, he has been awarded an Honorary DSc from the Southern Federal University, Russia (31 May 2024), in recognition of his involvement as the Lead Scientist in the Mega Project on Bioremediation of Polluted Ecosystems sponsored by the Russian Government. Professor Wong is ranked 6th for 3 years and 8th for 2 years (career-long ranking) in Environmental Science according to the World's Top 2% Scientists (Stanford University, 2020-2024).

Abstract: Coastal wetlands of Hong Kong have contributed significantly to serving as an essential site for cycling of different elements, improving water quality, flood water storage, protection of erosion, biological productivity, and conservation, etc., citing Mai Po Marshes (RAMSAR site), located at the northwest of Hong Kong as an example. Urban centers generated many persistent toxic substances (PTS), including heavy metals, persistent organic pollutants, and emerging chemicals of concern due to various anthropogenic activities. More recently, wetlands have been built to enhance purifying wastewater, biological conservation, and aquatic production. This presentation focused on the most common PTS encountered in Hong Kong, their biogeochemical processes in the urban ecosystem, their removal efficiencies in different types of sewage treatment plants, and potential adverse effects on the wetland habitats, which might threaten the endangered species (e.g., blackface spoonbill) visiting the RAMSAR site. The roles of constructed wetlands for treating wastewaters (focusing on PTS), providing habitats for a wide range of animals, improving scenic values of waterways, and for environmental education in this densely populated city are reviewed. The information included in this presentation is based on the results of a few research and consultancy projects supported by the Hong Kong Research Grants Council, the Environmental Conservation Fund (ECF) of the Environmental Protection Department, and the Drainage Services Department of the Hong Kong Government.

Keynote Speech 2: Optimizing O₃-UV Process for Wastewater Advanced Treatment with A Novel Mini-Fluidic Experimental System to Minimize Energy Consumption: Chemical Oxidation Vs. Advanced Oxidation

Prof. Zhimin Qiang School of Environmental Science and Engineering, Shanghai Jiao Tong University

Biography: Dr. Zhimin Qiang is a distinguished professor at the School of Environmental Science & Engineering, Shanghai Jiao Tong University. He was a recipient of the National Science Fund for Distinguished Young Scholars, and had

served as the director of Drinking Water Science and Technology of Chinese Academy of Sciences, and the director of Sate Key Laboratory of Environmental Aquatic Chemistry of China. His research covers advanced treatment, green disinfection, and safe distribution of water and wastewater. Prof. Qiang has led over 40 research projects, published about 250 SCI papers (H index = 62) and 120 Chinese papers, and been recognized as a Highly Cited Researcher by Elsevier in China. He holds 20 innovation patents and has received 8 national/provincial honors and awards.

Abstract: The ozone-ultraviolet (O₃-UV) process, which has emerged for advanced treatment of the secondary effluents (SEs) of wastewater treatment plants (WWTPs), requires optimization that balances the contributions of O₃ (chemical oxidation) and hydroxyl radicals (HO[•], advanced oxidation) to minimize energy consumption. In this study, a novel bench-scale mini-fluidic O₃-UV system (MFOUS) was developed, allowing for accurate determination and convenient adjustment of the key operational parameters including O₃ mass loading (*ML*) and UV fluence (*F*_p). The degradation of refractory organic compounds in the O₃-UV process, expressed by chemical oxygen demand (COD) reduction and biodegradability (i.e., ratio of biological oxygen demand (BOD) to COD) enhancement, was investigated for three typical SEs with different reactivities toward O₃. Moreover, an evaluation of operational parameters to balance the contributions of O₃ and HO[•]. For example, to achieve 40% of COD reduction in SE-1, the *ML* and *F*_p should be optimized to 0.340 kg m⁻³ and 0.009 einstein m⁻², respectively, resulting in the lowest energy consumption of 7.29 kWh m⁻³. Through optimizing the O₃-UV process for energy conservation, this study will help the WWTPs to achieve carbon-neutral goal in the future.

Keynote Speech 3: Application of Fluidized-Bed Fenton Process for Industrial Wastewater Treatment

Prof. Ming-Chun Lu

Department of Environmental Engineering, National Chung Hsing University

Biography: Prof. Ming-Chun Lu is a Distinguished Professor in the Department of Environmental Engineering at National Chung Hsing University, Taiwan. He

has served as an editor for Desalination since 2024 and has been an associate editor for Sustainable Environment Research since 2015. His outstanding achievements have been widely recognized with numerous honors. These include the Platinum Award at the Taiwan Innotech Expo Invention Competition in 2023 and 2024, the prestigious Future Technology Award from the National Science and Technology Council in both years, and the Outstanding Advisor Award for College Student Research and Creativity in 2023. He also led his team to win the championship in the Net-Zero Carbon Technology International Competition hosted by the TECO Technology Foundation in 2023 and was honored with the Outstanding Engineering Professor Award by the Chinese Institute of Engineers the same year. Professor Lu's research interests encompass advanced oxidation processes for water and wastewater treatment, fluidized-bed crystallization technology for treating wastewater containing metallic and non-metallic salts, and carbon dioxide capture from flue gas. He is also an innovator in developing disinfection, deodorization, antimicrobial, and antifungal technologies, as well as oil emulsification and desulfurization techniques. His work not only addresses pressing environmental challenges but also provides sustainable solutions that drive technological advancements.

Abstract: Rapid population growth and technological advancements in various industries have led to the generation of significant volumes of wastewater requiring effective treatment. Among the available methods, advanced oxidation processes (AOPs) are highly favored due to their high efficiency, cost-effectiveness, and eco-friendly nature. These processes utilize non-selective hydroxyl radicals (•OH) to oxidize and degrade toxic pollutants in wastewater. Among the AOPs, the Fenton process has demonstrated exceptional efficacy in treating recalcitrant organic compounds. However, a key limitation of this process is the generation of large quantities of sludge, necessitating additional treatment and disposal. The fluidized-bed Fenton (FBF) process addresses this issue by crystallizing iron onto the surface of carriers within the reactor, significantly reducing sludge production.

This presentation provides a comprehensive overview of recent advancements in applying the FBF process to treat industrial wastewater. Case studies are explored across sectors such as thin-film transistor liquid crystal display manufacturing, pharmaceuticals, textiles, phenol production, refractory organics, petrochemicals, and other chemical industries. These examples underscore the potential of FBF technology to effectively reduce recalcitrant organic contaminants in wastewater. Key advantages of the FBF process over conventional Fenton-based technologies are highlighted, including improved performance, optimized operating conditions, and critical factors influencing removal efficiency. Additionally, the presentation delves into the reaction kinetics and mechanisms involved, along with the characteristics and selection of carrier materials used in the process. Finally, insights into large-scale applications of the FBF process are discussed, showcasing its viability and adaptability in addressing the challenges of industrial wastewater treatment on a broader scale.

Keynote Speech 4: Biochar: An Eco-Friendly and Sustainable Material for Versatile Applications

Emeritus Prof. Chih-Huang Weng Department of Civil Engineering at I-Shou University

Biography: Distinguished Professor Chih-Huang Weng is currently the Chairman of the Department of Civil Engineering at I-Shou University, Taiwan. He also served as Vice-President of North Kaohsiung Community University, Taiwan. He is serving as the Editor of Water (MDPI), Environmental Geochemistry and Health

(Springer), and on the Editorial Board Panel Member of Coloration Technology (Wiley). He has also served as a Guest Editor of SCI journals, such as Agricultural Water Management (Elsevier), Environmental Science and Pollution Research (Springer), and Lecture Notes in Civil Engineering. He has also organized and chaired several international conferences. Professor Weng was listed in the World's Top 2% of Scientists (Stanford University, 2021-2023). His main research interests focus on using advanced oxidation processes and adsorption to treat wastewater and bacteria inactivation, groundwater modeling, and application of electrokinetic technologies to soil remediation/sludge treatment/activated carbon regeneration.

Abstract: Biochar is a carbonaceous material derived from the partial combustion of biomass wastes. It has been recognized as a sustainable material with various beneficial applications due mainly to its unique properties, which include a large surface area and electrical conductivity, rich pore configuration, high charge density and cation exchange capacity, high pH, and surface functional groups. Over the past decade, significant research interest has been paid to its effectiveness in improving Portland cement composites in construction and soil properties, as well as the benefits of addressing emerging environmental issues. The knowledge of improving biochar's applicability to sophisticated utilization in contemporary technology-related disciplines has expanded, particularly in its potential for catalyzed applications in batteries and supercapacitors for energy storage systems. This presentation outlines conventional and emerging feedstocks in biochar production, their performance as supplementary cementitious material, and their uses in various environmental applications. Specifically, the removal of pesticides and metals by biochar derived from agricultural wastes is highlighted. The need for future research on promoting biochar in combating climate change, reducing production costs, incorporating machine learning and artificial intelligence in optimizing biochar production and functionality, and establishing an appropriate standard for biochar preparation is also discussed. By focusing on waste utilization and versatile applications, biochar is an eco-friendly material that addresses environmental challenges and promotes a circular economy.

Part III Poster Presentations

Poster Presentation Guidelines

Materials Provided by the Conference Organizer:

- Poster Board
- Adhesive Tapes or Clamps

Materials Provided by the Presenters:

- Home-Made Posters
- Posters Printed by Conference

Requirement for the Posters:

Material: not limited
 Size: W1200*H2100

Best Poster Presentation Selection Procedure

Selection Criteria:

- Research Quality
- Presentation Skill
- > Design

Selection Procedure:

- 4-6 volunteers will be invited from the participants to serve as the judges to review the posters (Note: Judges have no conflict of interest with the presenters).
- 3 red stickers and 3 green stickers will be provided to the judges. The red sticker stands for "Research Quality" with a value of 2 points; the green sticker stands for "Presentation Skill and Design" with a value of 1 point.
- Each judge will go around the poster session and give the stickers to the poster which he/she thinks is of high quality or well designed and well presented, please be noticed that the judge cannot give 2 red or 2 green stickers to the same poster (one red and one green sticker are acceptable).
- After the poster session, the conference secretary will count the points from each poster and ONE best poster presentation with more points will be selected. If there is a tie, the one with more red (Research Quality) stickers wins.

Nature of the Award

- > This award consists of free registration to the ACEER 2026 and a certificate
- TWO outstanding poster presenters will be selected and honored with certificates during the Awarding Banquet. The winners will be announced at the banquet and featured on the ACEER 2026 official website.

Part IV Oral Presentations

General Guidelines

- **4** All presentation times are shown in Japan Standard Time (UTC+9);
- **4** Duration for Invited Oral Presentation: 15 minutes including 2-3 minutes of Q&A;
- ↓ Duration for Regular Oral Presentation: 12 minutes including 1-2 minutes of Q&A;
- ↓ Duration for Student Oral Presentation: 10 minutes including 1-2 minutes of Q&A;
- All presenters are requested to reach the Session Room prior to the scheduled time and complete their presentation on time;
- Presenters should prepare Power Point or PDF Files for Presentation with Paper ID (CEE****) marked on the last page;
- **4** A signed and stamped presentation certificate will be issued after the presentation.

Oral Presentation Guidelines

Devices Provided by the Conference Organizer:

- ↓ Laptops (with MS-Office & Adobe Reader) & Projectors & Screen
- Laser Sticks
- **4** Microphones
- Please send us the PowerPoint once it is ready and have the PPT back up in a U-disk. For presenters who do not send the PowerPoint, please save it in the laptop of the corresponding session 15 min in advance. Kindly tell the Session Chair (before the start of your session) that you are present.

Best Oral Presentation Selection Procedure

ONE best presentation will be selected from EACH **Oral Session I&II** and **THREE Best Oral Presentations** will be selected from EACH **Student Oral Presentations Session I&II** based on the following criteria:

- ✓ Research Quality
 ✓ Presentation Performance
 ✓ Presentation Language
- ✓ PowerPoint Design✓ Effective Communications

Selection Procedure

Session chairs will receive evaluation forms before the session begins, and the best presentations will be determined based on their assessments.

Best Oral Presentations and Outstanding Presentation Award

- The **Best Oral Presenters** from Oral Sessions I & II, as well as the **first-place presenters** from the Student Oral Presentations Sessions I & II, will be awarded 'Best Oral Presentation' certificates and complimentary registration to ACEER 2026.
- The second- and third-place presenters from the Student Oral Presentations Sessions I & II will receive official "Outstanding Presentation" award certificates.

		Unraveling the radical chemistry of nitrophenols and biomass-
16:35-16:50	CEE1905	burning brown carbon in waters
		Assist. Prof. Yu Lei, Shanghai Jiao Tong University
		Investigation and assessment of a multiple liquefied site in
16:50-17:05	CEE1895	Taiwan
		Prof. Chih-Sheng Ku, I-Shou University
		A case study on groundwater recharge assessment in reservoir
17:05-17:20	CEE1878	catchments using real-time infiltration monitoring
		Asst. Prof. Shih-Hsun Chou, I-Shou University
	07774004	Recycled cement as a promising greener earth stabilizer
17:20-17:32	CEE1896	Prof. José Alexandre Bogas, Universidade de Lisboa
		Hygrothermal performance of compressed earth blocks
17:32-17:44	CEE1897	stabilised with recycled cement
1,	01110/1	Prof. Maria da Glória Gomes, Universidade de Lisboa
		Study on sustainable utilization and microbial population
		evolution of Zn containing anaerobic digestion solution by
17:44-17:56	CEE1925	ecological restoration technology based on PBR symbiotic system
		of bacteria and algae
		Prof. Lei Feng, Shenyang Aerospace University

Student Oral Presentations Session I

Time: 08:40-10:40, July 23rd, 2025Location: Small Hall, Kunibiki MesseSession Chairs:08:40-09:40Prof. Mengkai Li, Research Center for Eco-Environmental Sciences, ChineseAcademy of Sciences09:40-10:40Prof. Ming-Chun Lu, National Chung Hsing University

08:40-08:50	CEE1982	A systematic literature review on the life cycle assessment of seawater
		desalination technologies
		Mr. Ming-Chun Tsai, National Taipei University of Technology
08:50-09:00	CEE1914	Differential Influences of hydrogen peroxide and persulfate on iron
		oxide-graphene oxide composite in advanced oxidation processes for
		acetaminophen removal and haloacetamide formation potential
		Ms. Shih-Wen Peng, National Sun Yat-sen University
		Nitrosamine-formation potential of highly used domestic
00.00 00.10	CEE1031	pharmaceuticals during photocatalytic oxidation under nitrogen
09:00-09:10	CEE1921	pollution
		Mr. Yu-Chun Tseng, National Sun Yat-sen University
		Enhancing N removal efficiency in partial nitrification-autotrophic
00.10.00.20		denitrification-anammox (PNADA) using sodium alginate-
09:10-09:20	CEEI917	polyallylamine immobilization combined with graphene oxide
		Mr. Yu-Lin Chen, National Sun Yat-sen University
		Development of the sulfur-based bio-carriers for autotrophic
09:20-09:30	CEE1945	denitrification
		Mr. You-Ren Yang, National Central University
	CEE1953	Coupled of partial denitrification and anammox for the concurrent
09:30-09:40		removal of ammonia, nitrate, and nitrite
		Ms. Iva Yenis Septiariva, National Central University
	CEE1964	Photochemical-aging of biodegradable microplastics: surface acidity
00.40 00.50		and adsorption towards Pb(II)
09:40-09:50		Ms. Zi-Qing Lin, National Kaohsiung University of Science and
		Technology
		Removal and recovery of copper from wastewater using fluidized-
09:50-10:00	CEE1882	bed reactor in acidic condition with sulfide (II) as precipitant
		Mr. Charles Wijaya, National Cheng Kung University
		Recovery of Iron(III) molybdate using fluidized bed homogenous
10.00-10.10	CEE1883	crystallization & its application in photo fenton-like degradation of
10.00-10.10		reactive red 195
		Mr. Cai-Sheng Lin, National Cheng Kung University
		Application of fluidized bed homogeneous crystallization technology
10.10-10.20	CEE1888	for decomposition of EDTA-Cu using persulfate and recovery of
10.10-10.20		Cu(II)
		Mr. Che-Yi Lien, Feng Chia University

10:20-10:30	CEE1889	Removal of fluoride from wastewater as crystalline and granulated cryolite by fluidized-bed homogeneous crystallization
		Mr. Chun-Hsuan Su, Feng Chia University
		RW-EDI as innovative alternative to traditional biological processes
10:30-10:40	CEE1994	for treating wastewater containing high concentrations of ${ m NH_4^+}$
		Ms. Haeun Oh, University of Seoul

Student Oral Presentations Session II

Location: Small Hall, Kunibiki Messe

Session Chairs:

11:00-12:00Prof. Jenn-Fang Su, Chang Gung University12:00-13:00Prof. Ching-Lung Chen, Ming Chi University of Technology

11:00-11:10	CEE1932	Converting iron sludge to effective Fenton catalysts for the post wastewater treatment Ms. Wei-Tong Li, Yuan Ze University
11:10-11:20	CEE1933	Reclaiming fluoride from high-tech wastewater using Ca/Mg loaded biochar Ms. Zi-Ying Lu, Yuan Ze University
11:20-11:30	CEE1958	Seawater/brine mining for crystallization of magnesium hydroxide via fluidized bed homogeneous crystallization Mr. Ting-Kuan Lu, National Cheng Kung University
11:30-11:40	CEE1959	Sulfide recovery as manganese sulfide from sulfide-containedwastewater using fluidized bed homogeneous crystallizationtechnologyMr. Guang-Chen Jheng, National Cheng Kung University
11:40-11:50	CEE1965	Ambient lithium recovery via lithium phosphate crystal growth fromlow-concentration synthetic wastewaterMr. Heng-Sheng Chen, National Kaohsiung University of Science andTechnology
11:50-12:00	CEE1851	Biochar production from waste Sterculia foetida shell by ball milling process and its potential use for polycyclic aromatic hydrocarbons suppressionMr. Divyashakti Sureshchandra Gautam, National Kaohsiung University of Science and Technology
12:00-12:10	CEE1890	Innovative shrimp shell-derived chitosan films functionalized with jabuticaba pomace extract for pork shelf-life extension: 3D cartographic insights into foodborne microbial cells disinfection <i>Ms. Ying-Chen Chen, National Chung Hsing University</i>

12:10-12:20	CEE1894	Application of PLAXIS 2D in evaluating the bearing capacity of pilefoundations in soft rockMr. Kai-Yu Lin, I-Shou University
12:20-12:30	CEE1987	Smart image recognition for industrial air pollution source control Ms. Ming-Fong Yu, National Sun Yat-sen University
12:30-12:40	CEE1967	Decentralized arsenic removal and recovery from synthetic groundwater via electrochemical synthesis of magnetite nanoparticles <i>Mr. Tsung-Wei Tseng, National Kaohsiung University of Science and</i> <i>Technology</i>
12:40-12:50	CEE1947	Advanced tree assessment on urban forest and park tree at Taiwan <i>Mr. Hung-Kai Chen, National Taiwan University</i>
12:50-13:00	CEE2002	Integrative approaches to carbon emissions reduction in civilengineering: framework based on digital twins, LCA, and materialoptimizationMr. Eiffel Vincent Manansala, Mapua University

Invited & Oral Session I: Water Treatment and Environmental Sciences

Time: 14:00-17:20, July 23rd, 2025Location: Small Hall, Kunibiki MesseSession Chair:14:00-15:12Prof. Wei-Fan Kuan, Chang Gung University15:30-17:18Assoc. Prof. Qian Wang, Guangdong Technion – Israel Institute of Technology

14:00-14:15	CEE1962	Evolution analysis of the Yellow River delta wetland supported by
		remote sensing data
		Prof. Xin Zhang, Aerospace Information Research Institute, Chinese
		Academy of Sciences
		Organophosphate removal from tannery wastewater by the Fenton
14:15-14:30	CEE1852	process and its combination with UV/ozonation
		Assoc. Prof. Qian Wang, Guangdong Technion – Israel Institute of
		Technology
		Continuous crystallizing system on copper removal in form of copper
14.20 14.45	CEE1903	hydroxide particles from industrial electroplating wastewater in a
14:50-14:45	CEE1692	fluidized bed reactor
		Assist. Prof. Kai-Yang Chang, Feng Chia University
		Does trade liberalization contribute to sustainable tourism via
14:45-15:00	CEE1946	industrial advancement?
		Prof. Yoshihiro Hamaguchi, Hannan University
		Analysis of drought events in Taiwan using multiple remote sensing
15:00-15:12	CEE1931	indices
15.00-15.12	0221/01	Dr. Chien-Ben Chou, Central Weather Administration
		Dr. Chien-Den Chou, Central Weather Maninistration
15.10 15.20		Coffee Presk
15:12-15:30		Coffee Break
15:12-15:30		Coffee Break Mitigating mammalian cell cytotoxicity of chlorinated drinking
15:12-15:30	CEE1960	Coffee Break Mitigating mammalian cell cytotoxicity of chlorinated drinking waters by advanced water treatment processes
15:12-15:30 15:30-15:42	CEE1960	Coffee Break Mitigating mammalian cell cytotoxicity of chlorinated drinking waters by advanced water treatment processes Dr. Chao Liu, Research Center for Eco-Environmental Sciences, Chinese

17:06-17:18	CEE2015	Climate change impacts on water resources: Evaluating future securities and adaptation in South Asian countries Mr. Mahibur Alam, Mr. Amir Uddin Ahmed and Mr. Nafi Naib Mon, Islamic University of Technology

Invited & Oral Session II: Structural Engineering, Geological Engineering and Sustainable City

Time: 14:00-17:10, July 23rd, 2025Location: Meeting Room 401, Kunibiki MesseSession Chair:14:00-15:15Prof. Jun Cao, Toronto Metropolitan University15:30-17:09Prof. Baochang Liu, Jilin University

		Computational analysis of tornado disaster towards a multi-building
14:00-14:15	CEE1955	configuration
		Prof. Jun Cao, Toronto Metropolitan University
14:15-14:30	CEE1857	Development of high-performance polycrystalline diamond compact
		cutters for oil and gas drilling
		Prof. Baochang Liu, Jilin University
	CEE1841	Strategies for seismic rehabilitation and economic viability for
		resilience in Peru: evaluating disaster risk reduction programs
14.20 14.45		through incremental seismic retrofitting
14:30-14:45		Dr. Héctor Aroquipa Velásquez, Universidad Nacional Autónoma de
		Tayacaja (UNAT)
		MSc. Álvaro Hurtado, Universidad de Lima
14:45-15:00	CEE1929	Seismic performance of tunnel-building-bridge systems in urban
		environments
		Prof Juan Manuel Mayoral National University of Mexico

		Passenger satisfaction and operational insights from Taiwan's urban
15:00-15:15	CEE1971	electric bus deployment
		Prof. Liang-Chien Lee, I-Shou University
15:15-15:30		Coffee Break
	CEE1884	Developing decision-making indicators of rain gardens for planning
15.30-15.42		and design at a school campus
15.50-15.42		Prof. Darn-Horng Hsiao, National Kaohsiung University of Science and
		Technology
		Watertight concrete structures for high quality and inaccessible uses:
15:42-15:54	CEE1920	a risk-based approach to crack prevention
		Prof. Claus Flohrer, German Committee for Reinforced Concrete
15.54 16.06	CFF1037	Turbulence effects of breaking waves on seabed soil response
15.54-10.00	CLEIJJI	Dr. Meng-Yu Lin, Chung Yuan Christian University
		Influence of glue thickness and grain direction on rebar adhesion in
16:06-16:18	CEE1847	sustainable Mengkulang Glulam structures
		Dr. Tengku Anita Binti Raja Hussin, SEGi University
16:18-16:30	CEE1926	Urban obsolescence: evaluating the sustainability of the city of
		Manila based on urban planning and design
		Dr. Geoffrey Rhoel Cruz, Mapua University
16:30-16:42	CEE1909	Revitalizing the historic urban landscape of the city of Manila
		through sustainable urban planning
		Dr. Geoffrey Rhoel Cruz, Mapua University
		Optimization of thermal insulation investments taking into account
16:42-16:54	CEE1934	the economic and ecological aspects of heating and cooling
		Dr. Robert Dylewski, University of Zielona Góra
	CEE1998	Vernacular visions: unintended occupation and individual
16:54-17:09		productions within public space
		Prof. Suzanne B. Dickens, Front Range Community College

Video Presentations

Video Presentations are listed on http://www.academicconf.com/video?confname=aceer2025

CEE1870	Creep tests of soft rock surrounding tunnel anchors and inversion of CVISC
	constitutive model parameters
	Mr. Jingyao Hu, Chongqing University
CEE1977	Geophysical methods' perspectives into leachate's infiltration in south-west Nigeria
CEE10/2	Dr. Theophilus Aanuoluwa ADAGUNODO, Bowen University
CEE1874	Research on deformation and force characteristics of hexagonal tube sheet lining
	structure of TBM tunnel in fault fracture zone
	Mr. Sanlang Zheng, Chongqing University
	Experimental study on the full stress-strain permeability characteristics of karst
CEE1885	breccia of the Triassic Jialingjiang Formation
	Mr. Taibing Liu, Chongqing University
CEE1978	What is fault breccia? —Classification suggestions for brittle fault rocks
	Mr. Xiangwei Kong, Guangdong Geological Survey Institute

Part V Conference Venue

Kunibiki Messe (Shimane Prefectural Convention Center)

The biggest convention center in Shimane prefecture, Kunibiki Messe, is located in the center of Matsue City. There are Exhibition Hall (4,018 sqm), Multipurpose Hall (686 sqm), International Conference Hall (510 sheets), and 19 meeting rooms.

Free Wi-Fi is available in building.

Kunibiki Messe Address: 1-2-1 Gakuen Minami Matsue City, Shimane, JAPAN 690-0826 Tel: +81+852-24-1111 Fax: +81+852-22-9219 E-mail: kunibiki@kunibikimesse.jp

Access to JR Matsue Station:

🔶 Train -Plane

1. From Narita International Airport

→ Bus

2. From Tokyo International Airport

3. From Kansai International Airport

Part VI Acknowledgements

On behalf of the ACEER 2025 Organizing Committee, we would like to take this opportunity to express our sincere gratitude to our participants. We would also like to express our acknowledgements to the Technical Program Committee members who have given their professional guidance and valuable advice as reviewers. For those who contribute to the success of the conference organization without listing the name below, we would love to say thanks as well.

Conference Chair

Dr. Chih-Huang Weng, Emeritus Professor, Department of Civil Engineering, I-Shou University

International Organizing Committee

Emeritus Prof. Hisayoshi Hayashi, University of Tsukuba Distinguished Prof. Ming-Chun Lu, National Chung Hsing University Distinguished Prof. Zhimin Qiang, Shanghai Jiao Tong University Prof. Delia B. Senoro, Mapua University Prof. Mikihisa Umehara, Toyo University Emeritus Prof. Chih-Huang Weng, I-Shou University Prof. Ming-Hung Wong, The Education University of Hong Kong

Technical Program Committee Chairs

Emeritus Prof. Hisayoshi Hayashi, University of Tsukuba Prof. Mikihisa Umehara, Toyo University

Technical Program Committee (TPC)

Dr. Ali Al-Balhawi, Mustansiriyah University Assist. Prof. Jinping Cheng, The Education University of Hong Kong Prof. Xuande Chen, University of Quebec at Rimouski Assoc. Prof. Robert Dylewski, University of Zielona Góra Prof. Jose Maria Goicolea, Technical University of Madrid Prof. Marco Guerrieri, University of Trento Dr. Malek Hassanpour, Osmania University Prof. Benjamin Heydecker, University College London Prof. Xiuhong Li, Beijing Normal University Lifetime Distinguished Prof. Yao-Tung Lin, National Chung Hsing University Dr. Yiyang Luo, Ghent University of Belgium Prof. Pavlo Maruschak, Ternopil Ivan Puluj National Technical University Dr. Yap Soon Poh, Universiti Malaya Prof. Delia B. Senoro, Mapua University Dr. Bright Singh Seeni, National Institute of Technology Goa Dr. Anoop Kumar Shukla, Manipal Academy of Higher Education Assoc. Prof. Qian Wang, Guangdong Technion - Israel Institute of Technology Emeritus Prof. Chih-Huang Weng, I-Shou University Assoc. Prof. Xingzheng Wu, Hebei University Dr. H. Sally Xie, Illinois State University The Technical Program Committee list above is in alphabetical order by last name.
